

Logical Backup in Multitenant Database

Procedure: PDB-to-PDB Migration using Oracle Data Pump (Lowercase Directory Name)

Database Version: Oracle Database 19c Enterprise Edition Release 19.0.0.0

1. Create OS Directory in PDB1 Database

Establish the export directory at the operating system level to hold dump files.

```
[oracle@souvik export]$ pwd /u02/export [oracle@souvik export]$
```

2. Create Logical Directory in SQL Level (Lowercase)

Define the directory object inside the database using lowercase characters.

```
SQL> create directory exp_pump as '/u02/export'; Directory created.
```

3. Grant Privileges on Logical Directory

Grant read and write permissions to the SYSTEM user for directory access.

```
SQL> grant read,write on directory exp_pump to system; Grant succeeded.
```

4. Execute Schema-Level Export

Export the schema (scott) from source PDB using Data Pump with lowercase directory.

```
$ expdp system/oracle@pdb1 directory=exp_pump dumpfile=scott.dmp schemas=scott Export:
Release 19.0.0.0 - Production on Tue Oct 6 15:07:25 2026 . . exported "SCOTT"."EMP" 8,898 KB 10
rows Job "SYSTEM"."SYS_EXPORT_SCHEMA_01" successfully completed
```

5. Prepare and Import in Target PDB

Recreate lowercase directory and perform import in the target PDB environment.

```
SQL> create directory exp_pump as '/u02/export'; SQL> grant read,write on directory exp_pump
to system; $ impdp system/oracle@pdb directory=exp_pump dumpfile=scott.dmp
```

6. Verify Target Database Schema

Connect as the migrated user and query the verified records.

```
SQL> show user; USER is "SCOTT"
```
