

PATCHING ACTIVITY From 19.3.0 to 19.15.0

- **First check the alert log file**

We have to check the alert log file; there we get the any error then resolve it first.

Find out the alert log file location name:

```
find /u01 -name alert*.log
```

```
[oracle@localhost trace]$ tail -50f alert_orcl.log
2026-06-17T15:16:05.995912+05:30

```

- **Take the full database backup with rman**

Verifying environment and performing prerequisite checks...
Prerequisite check "CheckMinimumOPatchVersion" failed.
The details are:

The OPatch being used has version 12.2.0.1.17 while the following patch(es) require higher versions:
Patch 33806152 requires OPatch version 12.2.0.1.29.
Please download latest OPatch from My Oracle Support.

UtilSession failed: Prerequisite check "CheckMinimumOPatchVersion" failed.

OPatch failed with error code 73
```

My opatch version is 12.2.0.1.17 but the version is required “Patch 33806152 requires OPatch version 12.2.0.1.29.”

- **Upgrade the opatch utility**

Backup OPatch

```
[oracle@localhost 33806152]$  
[oracle@localhost 33806152]$ cd $ORACLE_HOME  
[oracle@localhost dbhome_1]$  
[oracle@localhost dbhome_1]$ ls -ltrh|grep opatch  
[oracle@localhost dbhome_1]$ ls -ltrh|grep OPatch  
drwxrwxr-x. 14 oracle oinstall 4.0K Jun 6 00:35 OPatch  
[oracle@localhost dbhome_1]$  
[oracle@localhost dbhome_1]$ mv OPatch bkp_opatch  
[oracle@localhost dbhome_1]$  
[oracle@localhost dbhome_1]$ ls -ltrh|grep OPatch  
[oracle@localhost dbhome_1]$
```

```
[oracle@localhost u02]$  
[oracle@localhost u02]$ cp -r OPatch /u01/app/oracle/product/19.0.0/dbhome_1  
[oracle@localhost u02]$
```

```
[oracle@localhost dbhome_1]$ ls -ltrh|grep OPatch  
drwxr-x---. 15 oracle oinstall 4.0K Jun 23 00:29 OPatch  
[oracle@localhost dbhome_1]$ |
```

Now the opatch version is updated

```
[oracle@localhost dbhome_1]$ cd OPatch  
[oracle@localhost OPatch]$  
[oracle@localhost OPatch]$ ./opatch version  
OPatch Version: 12.2.0.1.30  
OPatch succeeded.
```

Then run opatch apply again error is coming.

- As we know no binaries not be usable inside the /u01 during patching activity else it will fail.
- But here some files inside the oracle_home still executed by some session hence our DB is down.
- So we have to find out that session and killed that for our activity.

- **For checking which activity is running command:**

lsopf | grep "/u01/app/oracle/product/19.0.0/dbhome_1"

- Now kill the session

```
[root@localhost oracle]# kill -9 2744
[root@localhost oracle]# lsof | grep "/u01/app/oracle/product/19.0.0/dbhome_1"

Kill the session and no processes are running.

- Now run opatch apply

But the error is coming. Its space issue.
